## SUMMARY

---

M.S.–Ph.D. integrated course student in Artificial Intelligence at DGIST, conducting research under the supervision of Prof. Sunghoon Im at the Robotics and Vision Lab. My research centers on **representation alignment**—aligning features and attention across text, images, and reference subjects—so that generative models remain **consistent and controllable**. This perspective spans style transfer and object-centric editing, consistent multi-image generation, and reward-based post-training (ReFL, GRPO) for subject-driven personalization, and is currently being extended to **video world models**, where long-horizon temporal consistency and controllability are the central challenges. This line of work has been recognized with an **ACM SIGGRAPH Asia 2026 Oral**, an **AAAI 2026 Oral**, and a **CVPR 2025 Highlight (Top 3.7%)**, as well as multiple international peer-reviewed papers.
